Overview

Welcome to the Retail Engagement Program (REP). This system is designed to provide the tools and resources needed to effectively manage the REP system.

The REP system has two parts: the Windows application and an Administrative Portal.

Information on installation and usage of the Windows application can be found in [Appendix B](#).

This document focuses on the administrative website where country data is managed. The initial data in the REP system is pre-populated from the Roll Up file completed prior to training.

The information in the Roll Up file includes:

- Retail chains and stores
- Field Representatives (Reps) and management team

The web portal manages the above information as well as control:

- Resources used to train Retail Sales Professionals (RSPs)
- Resources for the Reps
 - Plan-o-Grams
 - Kiosk Maintenance
 - Demo Installation
 - Field Rep training resources
- Breaking News – Notification system for new products, calls to action, and other locally relevant news that the Reps need.

The following reports are available:

- Scorecard – KPI statistics view
- Store Visit Compliance
- Training Activities
- Photos

Call report data can also be exported to Excel for further analysis.

Getting Started

Before using the REP portal, the following steps should be completed:

[REP – Engagement Survey](#)

This survey requests the following information:

- Country Contact information
- Current reporting capabilities
- Field labor breakdown by rep type as defined in the [Field Labor Playbook](#)

[Roll Up File for Retail Engagement Program](#)

After completing the survey, a Roll Up file is need to pre-populate the REP system for your country. The roll up file defines:

- Administrator username and temporary password
- Retail Chains
 - Chain names should match Retail-BI for KPI reporting.
 - Chain Classification – used to assign different execution/support levels per stores in the chains. Refer to the Field Labor Playbook for definitions of Good/Better/Best execution.
- Retail Stores
 - Address
 - GPS coordinates
 - Monthly Visit Frequency
- Territory structure
- Field Reps and their managers

Instructions for completing a Roll Up file are included in the spreadsheet.

Once both of these files are complete and entered into the REP system it takes approximately 2 business days after the last completed submission of the Roll Up file before the files can be accessed and maintenance can begin.

Please refer to [Appendix A](#) for a checklist of tasks to complete during initial setup.

Website Login

Use the initial username and password designated in the Roll Up file. Send an email to MSFTREP@Microsoft.com, if this information is needed.

Click on the following link, or type the address into your browser: www.msftreps.com

The login page appears:

During the first login to the system, a prompt to change the temporary password and security question appears:

REGISTRATION

Welcome to the Retail Engagement Program Site.

Please complete the information below to create a secure login identity. Fields marked with () are required.*

First Name* test

Last Name* acct

Email* tacct@live.com

Re-type Email* tacct@live.com

Time Zone* (UTC-08:00) Pacific Time (US & Canada) ▼

Security Question

Security Answer

Reset Save

Password Requirements:

- Must be from 8 to 14 characters long.
- Contain at least 1 uppercase character and at least 1 lowercase character.
- Contain at least 1 of the following special characters: - _"!@#\$%^&*+=(){}[]<>|\`~,.,:;/?

Enter a new Password, Security Question and Security Answer. Click on Save at which point the REP Home screen will appear.

Home Screen

Welcome and Setup

The country welcome message can be changed to include locally relevant items like procedures, holidays, etc. Instructions on installing and setting up the REP application can also be found here.

Note: During the initial deployment of the program, the Windows 8.x application is in Beta status. You will need to load the application following the instructions in Appendix A.

Call Reports

Call reports are forms created to guide the Rep in their activities while visiting their retail stores. A global Store Visit template has been created that includes questions that will map directly back to the Retail-BI KPIs. For a full list of KPIs that are tracked globally, see [Appendix C](#).

The Global Store Visit template is divided into sections by category: Windows, Surface, Office, Xbox and PC Accessories. When creating a call report, select the categories that map directly to the products that are supported by each type of Rep available in country.

There are additional questions/tasks included in the global template that can be modified or deleted as needed. Locally relevant questions and tasks can also be added. See the [Call Reports](#) section below for more details.

Dashboard

To see the progress of your field teams and all information gathered in the field, use the standardized reports located in the dashboard. Report details can be found in the [Dashboard](#) section below.

Administration

The administrative section is dedicated to maintaining the following items:

- [General Settings](#) – Settings for the Welcome page on the website.
- [Database Management](#) – Maintenance tasks associated with stores, chains, and users of the REP system.
 - [Store Management](#) – Add/Remove/Modify store lists, chains and chain classifications.
 - [User Management](#) – Add/Remove/Modify Administrators, Reps and Rep managers.
 - [Assignments](#)
 - [Store Assignments](#) – Assign Reps to stores
 - [Calendar](#) – Assign store visits to Reps
- [Resource File Management](#) – Upload localized copies of files used by the Reps in the stores. This can include:
 - Plan-o-grams
 - Kiosk maintenance and setup instructions
 - Demo installation instructions
 - Training resources for the Reps
- [RSP Training Management](#) – Maintenance of the Monthly Training Guidance that was previously available as a PowerPoint Presentation.
 - Global monthly templates are pre-populated based on the monthly training guidance and grouped by category.
 - Modifications can be made based on the availability of product in market.
 - Resources from www.MicrosoftRAD.com (US-EN) are pre-populated. If localized versions of the resources are required, they can be downloaded from RAD, localized and uploaded to REP.
- [Breaking News](#) – Maintenance of the Breaking News section of the application home screen. Global breaking news will be available to accept, reject or localize based on product availability or relevance in region.
- [Change Log](#) – Track changes to the information in the REP system.

Call Reports

Creating and editing call reports offers the Administrator an extreme amount of flexibility in managing field labor activities across the retail chains in country.

The system offers a variety of response types (large text box, photo capture, drop down list, multiple select list, etc.) to best format data collection needs. [Appendix D](#) contains a complete list of field types and their definitions.

Call Reports support basic conditional form logic. For example, creating a drop down menu with 5 items and having a new question appear if one of those items is selected.

The entire interface has over 100 functions and features and will take 15-30 minutes to learn how to use this.

All forms have support for language localization. The client application detects the language setting of the device and if a translation is available (in part or in whole), the translation will display.

Create Call Reports

After clicking Create, enter a **Form Title** and **Description**. These will display on the Windows application home screen like the tile to the right.

Select a **Template** from the drop-down list. If no call reports have been created, the only one available will be the Global Store Visit Call Report. This template is divided into sections by category: Windows, Surface, Office, Xbox and PC Accessories. During call report creation, select the categories that map directly to the products that are supported by each type of Rep in country.

There are additional questions/tasks included in the global template that can be modified or deleted as needed. Locally relevant questions and tasks can also be added.

Note: It is recommended to create a master call report specific for the country. This should include any question that may need to be asked in any retailer. After adding in the country specific information and localizing if needed, this master call report can then be used as a template for all call reports in country without the need to localize each report.

If there are previously created call reports, pick one to copy. All modifications made to the original call report will be copied into the new one, including conditional logic and localization.

Check the **Include Store List** option and click on **Next**.

Call Report Assignments

Call reports can be assigned to any combination of Field Rep type, Retail Chain, or Chain Classification.

Assign Reps

By assigning Reps different titles based on job function or responsibilities, the call report can be customized to fit the specific needs. For example: if field reps only support Xbox assign them a title of Gaming Rep and create a call report that only has the relevant questions for the gaming department. For more information on Rep Titles, see the [User Management](#) section of this guide.

Call Report Wizard - Select Titles

If this form applies only to specific job titles, select those that apply in the list below.

Title
☒ All Titles
☐ Trainer
☐ Account Manager
☐ Administrator

Back Next Cancel

Select the Rep Titles that need to have access to this call report and click the **Next** button.

Assign Chains and Classifications

Classifications are used to define different support levels for stores in a chain. Following the Field Labor Guidance, the classifications would be Good, Better, and Best. Additional classifications based on the support provided to local retailers can be defined. See the [Store Management](#) section of this guide for information and setup of store classifications.

Call Report Wizard - Select Chains/Classifications

If this form applies only to specific chains or classifications, select those that apply in the list below.

Chain/Classification
☐ All Stores
☐ Best Buy
☐ --- Best Buy High
☐ --- Best Buy Low
☐ --- Best Buy Medium
☐ EB Games
☐ Future Shop
☐ London Drugs
☐ Shoppers Drug Mart
☒ Staples
☐ Target
☐ The Source
☐ Toys R Us

Back Next Cancel

Select the Retail Chains for this form, and click the **Next** button to continue.

Select Sections

The Global Call Report template has sections for each product category which includes a standard set of tasks. Some of those tasks can be edited or removed, but others will map to global KPIs and cannot be removed.

Call Report Wizard - Hide Sections

You can hide sections of this form. Hidden sections will not show up on any user's device. Uncheck any sections below that don't apply for your form.

Section	Visible
Surface	☒
Windows	☒
Xbox	☐
Office	☒
PC Accessories	☒

Back Next Cancel

Select any section that should not appear in the call report. Sections without a checkmark will be hidden in the form; however, these sections can be reactivated later if needed. See the [Hiding/Un-Hiding Sections](#) in this guide for more information.

Task maintenance

A call report with the default global questions pre-populated has now been created. Changes and locally relevant guidance can now be added into the call report.

Call Report Wizard - Edit Sections/Fields

Build Your Call Report

To start, select the Add Button. Choose if you want to Add a field or Add a Section. Fields are items which your users will respond to; Sections are like page titles which will format the mobile call report into organized groups of questions. Once you have added a field/item or a section, use your right mouse over each item to display multiple edit options as needed.

Call Report Contents	Type
Other title? (has conditional logic)	- Field: Alphanumeric
Store contact first name?	- Field: Alphanumeric
Store contact last name?	- Field: Alphanumeric
Section 2: Surface	Section
Is there a Microsoft Surface display installed in the store?	- Field: "Yes" or "No"
Which Surface displays are installed (check all that apply) (has conditional logic)	- Field: Multiple-select List of Values
Permanent Fixture Endcap	-- List Item
Double Inline Fixture	-- List Item
Inline Placemat	-- List Item
Dedicated Surface Table	-- List Item
Other	-- List Item
Describe "Other" Surface display (has conditional logic)	- Field: Alphanumeric
Surface Display (has conditional logic)	- Field: Multiple-select List of Values
Verify the display is clean and dust free	-- List Item

Back Next Cancel

Adding New Tasks/Questions

To add a new task or question (field) click on the **Add** button on the top of the Call Report Wizard and select the section where a new field should be added. New fields show up at the bottom of the section, but can be moved by dragging and dropping them into the correct location.

Call Report Wizard - Edit Sections/Fields

Build Your Call Report

To start, select the Add Button. Choose if you want to Add a field or Add a Section. Fields are items which your users will respond to; Sections are like page titles which will format the mobile call report into organized groups of questions. Once you have added a field/item or a section, use your right mouse over each item to display multiple edit options as needed.

Add a New Field to...

- Section 1: Visit details
- Section 2: Surface
- Section 3: Windows
- Section 4: Xbox (hidden)
- Section 5: Office
- Section 6: PC Accessories

Fields:

- Other title? (has conditional logic)
- Store contact first name
- Store contact last name
- Is there a Microsoft Surface in the store?
- Which Surface display is the best? (has conditional logic)
- Permanent Fixture Endcap
- Double Inline Fixture
- Inline Placemat
- Dedicated Surface Table
- Other
- Describe "Other" Surface display (has conditional logic)
- Surface Display (has conditional logic)
- Verify the display is clean and dust free

Type

- Field: Alphanumeric
- Field: Alphanumeric
- Field: Alphanumeric
- Field: "Yes" or "No"
- Field: Multiple-select List of Values
- List Item
- List Item
- List Item
- List Item
- List Item
- Field: Alphanumeric
- Field: Multiple-select List of Values
- List Item

Buttons: Back, Next, Cancel

Once a section is selected, the Add a New Field dialog box opens.

Add a New Field

***Prompt**

Enter the words that the user will be prompted with for this field. (E.g., "How much did you bill the customer?", "Date:", "Notes:", etc. - Use punctuation as desired.)

***Response Type**

Select the kind of response that the user can enter for this field. A detailed description appears below for the response type that is selected.

- ☒ Alphanumeric
- ☐ Numeric Only
- ☐ "Yes" or "No"
- ☐ Date
- ☐ Email Address
- ☐ Pre-defined List of Values
- ☐ Multiple-select List of Values
- ☐ Large Text
- ☐ Display Message
- ☐ Phone Number
- ☐ Bar Code
- ☐ Photo
- ☐ Signature/Drawing
- ☐ Website/File Link Button

Alphanumeric: Allows any text that the device supports, up to 255 characters.

Advanced Options

Required: Require the user to respond to this field? ☐

Maximum Length: Enter the maximum number of characters (1-255) allowed

Default Value:

- ☒ No default value
- ☐ Always default to this value
- ☐ Always default to the last value entered by the current user
- ☐ Always default to the last value entered by any user of this form

Buttons: Save, Cancel

Enter a **Prompt**. A prompt is the action the user should take to complete a task. For example:

- Take a photo of the front of the store
- Select all that apply to the promotion
- Were there more than 100 people in the store when you were there?

Select the **Response Type**. The call report builder offers multiple formats such as, Yes or No, drop down menu, multiple select, photo capture, create a button to go to a link on the web or open a file that has been uploaded (and automatically downloaded to the device) to run (graphic, video, Word, Excel, PDF, PPT, etc.). [Appendix D](#) contains a complete list of field types and their definitions.

Select the **Advanced Options** for this field. The options will vary based on the response type.

Click on the **Save** button when finished.

Editing or Removing Questions

Edit or remove questions in the call report by right clicking on a field and choosing the appropriate option in the pop-up menu.

Fields from the global template have the following restrictions:

 Field can be removed or changed. Fields added will always be marked green.

 Field cannot be removed or changed. These questions are required.

 Field cannot be removed, contents can be changed. Usually used in drop down select fields. The content of the drop down options can be changed, but not the field name.

 Field can be removed but not changed. These are optional fields that can be remove, but not edited.

Hiding/Un-hiding Sections

Sections can be hidden or made visible depending on the products supported in the retailer. For example: A retail chain does not currently assort Surface so those questions can be hidden.

Right click on the section name and select **Hide this Section**. This section will not appear on the field rep's device.

If the retailer eventually assort Surface devices, the section can be made visible again by right clicking on the section and selecting **Unhide this Section**.

Conditional logic

Conditional logic allows questions to be hidden or appear based on answers to prior questions in the same section. For example: a question asking if a display is set up properly (to plan-o-gram) is answered as “No”, another can be displayed to ask why the display is not set up properly.

Conditional logic can be triggered by Yes/No, Single Select and Multiple-Select questions. See [Appendix D](#) for definition of available field types.

Call Report Wizard - Edit Sections/Fields

Build Your Call Report

To start, select the Add Button. Choose if you want to Add a field or Add a Section. Fields are items which your users will respond to; Sections are like page titles which will format the mobile call report into organized groups of questions. Once you have added a field/item or a section, use your right mouse over each item to display multiple edit options as needed.

Call Report Contents	Type
Verify the display is stocked	-- List Item
Take a picture of the Office software tray (has conditional logic)	- Field: Photo
Is there a Windows Pinball display in the store?	- Field: "Yes" or "No"
Is Office merchandised on the Windows Pinball display? (has conditional logic)	- Field: "Yes" or "No"
Is Office 365 displayed in the PC Department?	- Field: Pre-defined List of Values
Yes - Fact Tags Only (Default)	-- List Item
Yes - Product on display	-- List Item
Yes - Fact Tags and Product on display	-- List Item
No	-- List Item
Explain why Office 365 is not in the PC Department (has conditional logic)	
Is the Office "Save Now" offer visible in the PC Department?	
Take a photo of the "Save Now" offer (has conditional logic)	
Explain why the offer is not visible in the PC Department (has conditional logic)	
Section 6: PC Accessories	
Is Microsoft Hardware on display in this store (keyboards/mice/cams)?	- Field: "Yes" or "No"

Back Next Cancel

To use conditional logic, right click on the field and select **Show/Hide This Field Conditionally**

Conditional Logic

☐ Always show this field (no conditional logic).
☐ Hide this field if ...
☒ Show this field if ...

... the response to the following field (select one) ...

Is there an Office SKU Chooser on display in the store?	"Yes" or "No"
Which Office SKUs are merchandised (select all that apply)?	Multiple-select List of Values
Office Software Tray	Multiple-select List of Values
Is there a Windows Pinball display in the store?	"Yes" or "No"
Is Office merchandised on the Windows Pinball display?	"Yes" or "No"

☒ ... includes one of the items selected below:
☐ ... does NOT include one of the items selected below:

☐ Office 365 Home Premium
☐ Office 365 University
☐ Office Professional 2013
☐ Office Home & Student 2013
☐ Office Home & Business 2013

Save Cancel

Select the option to **Always show** the field, **Hide** or **Show**, then select the field that this is based on from the list presented.

Select options based on the type of field selected, and click the **Save** button when complete.

After all changes have been made, click on the **Next** button.

Call Report Wizard - Review

Review and Finalize

Your call report is ready to submit. Review the items on the right. If you wish to make any changes, click on the "Back" button and make your corrections. If you are ready to save your call report, click on the "Finish" button.

Call Report Contents	Type
Test	Call Report
Section 1: Visit details	Section
Visit status	- Field: List
Visit Complete (Default)	-- List Item
Closed Temporarily	-- List Item
Closed Permanently	-- List Item
Management Refused	-- List Item
When will the store reopen? (has conditional logic)	- Field: Text
Why did the manager refuse? (has conditional logic)	- Field: Text
Store contact information	- Field: Display
Who did you speak with during your visit?	- Field: List
Store Manager (Default)	-- List Item
Assistant Store Manager	-- List Item
Sales Supervisor	-- List Item
Sales Support Supervisor	-- List Item
Other	-- List Item

Review the call report then click on the **Finish** button to save the report.

A prompt to localize the call report will be displayed.

Click the No button if localization is not needed.

To localize the call report, click the **Yes** button.

Note: If this call report was created from a copy of one that was previously localized, there is only a need to localize any new questions added. If questions were only removed from this call report, there is no need to localize.

Localization

Call Reports can be localized into any language supported by Windows 8.x. Instructions on how to load a language pack onto a Windows PC can be found here: <http://support.microsoft.com/kb/2607607/en-us>

Localization is currently limited to the fields in a call report. System-wide labels are currently in English and we are looking to incorporate localization of the full application in the next version (H2FY14). Examples of items that will currently display in English are the buttons used for navigation and dialog boxes:

To localize a call report, select the language from the drop-down list.

The list of languages is color coded based on translation of the form. If the language is orange, it is partially translated. If the language is green it has been completely translated, otherwise the color is black.

Step 1 - Select your target language: French
 Step 2 - Double click on an item to translate.

Edit Form Language

Form Fields	Original: English	Target Language: French
▼ Form Title	Staples	
▼ Page 1 Title	Visit details	Détails
▼ Display field	Visit Objectives	
Display Message:	Engage consumers to drive holiday sales Land the Surface 2 and Surface Pro 2 pitch Land the Surface 2 and Surface Pro 2 demos Drive Office 365 attach through effective demos Show 3 Windows 8.1 apps Ensure all product areas are merchandised and clean	
▼ List field	Visit status	Statut
List Item 1	Visit Complete	Terminé
List Item 2	Closed Temporarily	Temporairement fermé
List Item 3	Closed Permanently	Fermé en permanence
List Item 4	Management Refused	Gestionnaire refusé
Text field	When will the store reopen?	
Text field	Why did the manager refuse?	
▼ Display field	Store contact information	Coordonnées du magasin
Display Message:	It is important that you accurately record your store contact's first & last name, as this information may be used to send a visit satisfaction survey.	
▼ List field	Who did you speak with during your visit?	

For each field in the call report, double click on it to translate. Type in the translation on the right side and hit enter or click another question to save the changes.

If multiple translations are needed, just select the language from the drop down list and enter those translations as well.

Note: Localization may only need to be done once for the first call report that is created from the global template. Create a new call report as a copy of this one, it will retain the localization already completed. Only new questions added need to be localized.

There is no save option here. All updates are available after exiting the translate field.

Manage Call Reports

This module provides functions to report on activity for call reports; assign alerts (escalations and scheduled reports); and the ability to modify and localize call reports that have already been created.

Transaction Report

Call Reports	Options						
Best Buy Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
EB Games Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
Event Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
Future Shop Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
Staples Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete

Transaction Reports display all submissions for a call report for a specified date range.

A Rep can view all of their transaction reports, a manager can view all transaction reports from Reps that report to them and an admin for the country can view and modify all transaction reports.

Transaction reports can viewed with all photos as a PDF and can also be exported to Excel. Excel export will also include all photos taken at that store visit.

Select a Date Range (defaults to the last report submission date). Managers can also select a single rep or all reps assigned to them. Select the **Get Results** button.

Quick email function to submit send report to others.

Click to view transaction in a formatted PDF Report

Click to view and edit store notes

Export records to an Excel spreadsheet.

View photos taken during this store visit.

When Location Coordinates are available with the transaction, map icon will drop out to Bing maps.

	Device ID	First Name	Last Name	Received	La
1	896 743 1596	Lindsay	Anne	Wed, Jan 15, 2014 08:58:44 PM	Una
2	896 743 1596	Lindsay	Anne	Wed, Jan 15, 2014 08:39:07 PM	Una
3	896 743 1596	Lindsay	Anne	Wed, Jan 15, 2014 08:33:05 PM	Una
4	896 743 1596	Lindsay	Anne	Wed, Jan 15, 2014 06:23:05 PM	Una

Store Notes

Store notes are input from the reps while in the stores. These can consist of reminders or helpful hints about the store. Clicking on the pencil icon in a transaction report  ⁽⁴⁾ will open the Store Note editor for editing or deleting of content. These modifications will appear in the application the next time it is synchronized.

Store Notes

Staples
 7155 KINGSWAY, UNIT 250
 South Beach, FL V5E2V1

By: Lindsay Anne	Submitted: 01/15/2014 18:22	Edit	Delete

By: Lindsay Anne	Submitted: 11/24/2013 19:14	Edit	Delete
Note: Holiday party on 12/3 - bring refreshments.			
By: Lindsay Anne	Submitted: 11/24/2013 18:42	Edit	Delete
Note: No training allowed from 11/6 through January 3rd.			

Export Transaction Reports

Basic reporting is contained in the Dashboards. The Download to Excel option allows further analysis of call reports.

Click on the Download to Excel button . Select whether to include photos and the size of the photos, then click **Export**.

Excel Export Options

Photo Options

Include Photos: ☒

Image Size:

☒ Small

☐ Medium

☐ Large

[Cancel](#) [Export](#)

Note: Exporting photos does not download the full resolution photo, only thumbnails of the original photo.

Once the file is opened in Excel, all of the questions included in the call report will be listed as the column headers. Each store visit will be a row in the spreadsheet.

Note: Currently, if photos are included and the data is sorted, the photos will not remain with the correct record. To resolve this, enter titles in the columns that contain pictures before selecting the Filter and Sort options in Excel. A solution to this problem is being investigated.

Before (notice that there are no filter options for the photo columns):

	DG	DH	DI	DJ	DK	DL	DM
1	Start Tim	End Tim	Duration				
2	18:41	18:44	0:03:14				
3	19:06	19:06	0:00:04				
4	19:23	19:23	0:00:06				
5	20:09	20:10	0:00:14				

Turn off filtering, add column headers and then turn filtering back on.

After (photos will now sort and stay with the original record):

	DG	DH	DI	DJ	DK	DL	DM
1	Start Tim	End Tim	Duration	Photo1	Photo2	Photo3	Photo4
2	18:41	18:44	0:03:14				
3	19:06	19:06	0:00:04				
4	19:23	19:23	0:00:06				
5	20:09	20:10	0:00:14				

GPS

Call Reports	Options						
Best Buy Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
EB Games Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
Event Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
Future Shop Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
Staples Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete

When this solution is used on a Windows Phone 8.x or Windows 8.x device with built in GPS chipsets, submission to the server of call reports are often real-time and provide a higher accuracy of tracking users.

When tracking users using a non GPS device, location based services are provided by the closest Wi-Fi service in which the device is connected. GPS Tracking using non-GPS enabled devices is not expected to be a highly accurate or timely way of tracking users with the Retail Engagement Program.

Select a Date Range (Managers can also select a single rep or all reps) and select the Get Results Button.

Welcome Call Reports Administration Help

[Back to Form List](#) **GPS Report: Alan Test 1 (English)**

From: 07/11/2013 User Name: All Language: English Get Results

Page 1 of 1 Results per page: 25

Future Shop Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
Staples Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete

Escalations are used to monitor a particular response to a question and email any one person or multiple people that an event/response was met. For example, if a question says “does this store require immediate management assistance?” Yes or No. If the user selects “Yes”, when the record is submitted, that record will send an alert to the denoted manager. This could be an inventory level to an inventory manager, etc. This is highly open-ended where any item in a form can be set up to trigger an escalation.

Create a New Escalation Alert

Your escalation alert list is empty. Click the link above to set up y

Click on **Create a New Escalation Alert**

Step 1 - Name / Email Info

Name This Task and Set Email Information

- *Name: Select a name to identify this task. This name will show up in the task list so that you can review, edit or delete the task at a later time.
Task Name:
- Email Subject (optional): When this alert or report is triggered, an email will be sent out to the addresses you choose (in Step 2). Enter the subject line that you want to appear in these email messages.
Email Subject:
- Email Message (optional): You can also include a message that will appear in the body of your emails for this task.
Email Message:

Next

Enter the **Task Name**, **Email Subject**, and the **Email Message** for this escalation. Click the **Next** button to continue.

Step 2 - Recipients

Enter your Email Recipients

Enter the email address of each person you want to include as a recipient for this alert or report, and then click the "Add Email" button. The list of all added addresses is visible below highlight an address in the list box and click the "Remove" button to remove it from the list.

☒ **Include the sender** (This will send the email escalation message to the user who submits the message.)

☒ **Include the manager** (This will send the email escalation message to the user's manager.)

Add an e-mail recipient:

myemail@microsoft.com

Check the appropriate boxes to include a copy of the message to both the sender (field Rep that submitted the report) and the manager of the Rep.

Enter the email addresses of the people to be notified.

Step 3 - Filters

Set Filters for This Email

Enter the email address of each person you want to include as a recipient for this alert or report, and then click the "Add Email" button. The highlight an address in the list box and click the "Remove" button to remove it from the list.

For Multiple Filters: ☒ ALL filters must be true ☐ ANY filter may be true User Filter: Any User

	Field	Response Type		Filter
1	Alpha Test:	Alphanumeric	Set Filter	None
2	Numeirc Test:	Numeric only	Set Filter	None
3	Yes or No Test:	Yes/No (list)	Set Filter	None
4	Date Field:	Date	Set Filter	None
5	Email address:	Email address	Set Filter	None
6	Select List: (Blue,Green,Yellow,Red)	Pre-defined list of values	Set Filter	None
7	Multiple Select: (Alpha,Beta,Gama)	Multi-select list	Set Filter	None
8	Test of Notes:	Large text box	Set Filter	None
9	Disnlay Messane:	Disnlay messane		None

[Back](#) [Cancel](#)

Set Filter

"3. Select List: "

equals one of the following

☐ Blue

☒ Green

☐ Yellow

☐ Red

[Save Filter](#) [Cancel](#)

Select the Set Filter link next to the escalation item. A box will pop up to set the detail. Save this information and select Finish to complete.

Schedule Reports

Call Reports	Options						
Best Buy Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
EB Games Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
Event Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
Future Shop Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
Staples Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete

Schedule Reports is very similar to creating an Escalation. See [Escalation](#) in this guide for details.

Escalations send a single call report each time the criteria is met. Scheduled reports will group all of the records that meet the criteria and send an Excel attachment containing those records.

In addition to the steps to create an escalation, there is an additional step in the set up wizard:

Step 2 - Frequency

Select Report Frequency

☒ **Daily:** Send an email once a day with all the previous day's records.
☐ **Weekly:** Send an email once a week with all the previous week's records.
☐ **Monthly:** Send an email once a month with all the previous month's records.
(Data actually sent in each case is subject to filtering as defined in the "Filters" section.)

Time of Day to Send:

Hour: 2 AM

Minute: 0

Time Zone for Form: (GMT+09:00) Australia/Brisbane

Back

Next

Reports can be scheduled daily, weekly or monthly, denote the time in which they want the reports to come and in what time zone.

Configure

Call Reports	Options						
Best Buy Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
EB Games Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
Event Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
Future Shop Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete
Staples Call Report	Transaction Report	GPS	Escalation	Schedule Reports	Configure	Language Tools	Delete

This option is to modify an existing call report. It allows the addition of items, moving items around and modify some items but not all. For example, a pick list cannot be changed to a numeric or photo field (database limitation).

WARNING: Currently, deleting an existing question will delete all data that was collected for that question. A method for deleting questions and retaining historical data is being investigated.

If a question has to be removed and the data needs to be preserved, follow these steps:

1. Create a new call report selecting the current call report as a template. See [Create Call Reports](#) section for details.
2. Modify the new report as needed
3. Make the old current call report inactive by unchecking the **Active** checkbox.

Administration

General Settings

This module is for managing the welcome message for the Reps, and default settings for transaction reports in the REP system.

The screenshot shows the 'Edit Account Info' and 'Company Logo' sections. The 'Edit Account Info' section includes fields for Company Name (Microsoft Inc.), Map Preference (Bing Maps), Pdf Photo Size (medium), and Photo Position (inline). The 'Company Logo' section has a text area for instructions, a preview of the Retail Engagement Program logo, a 'Remove Logo' link, and an 'Upload New Image' button with a 'Select a File' button. Below these is the 'Welcome Message' section with a rich text editor showing the text: 'Welcome to the Retail Engagement Program portal. This portal is designed to manage the retail field labor program by market and account across Windows, Xbox, Surface and Office.' At the bottom right are 'Reset' and 'Save' buttons.

Edit Account Info

Company name: Country

Map Preference: Bing

The following options affect photos in PDF reports:

Pdf Photo Size: Small, Medium, or Large. This is the size of the photos taken in a call report as they appear in a PDF report.

Photo Position: Inline or end. Inline will keep the photos in the same order as the call report questions. Selecting End will put all photos at the end of the report.

Company Logo

The REP system logo appears in the header of PDF reports.

Welcome Message

This is the message reps will see when they click on the Welcome and Setup icon on the home screen. It can be used to customize a message to them. It accepts rich text, so localized content can be placed here.

Database Management

This module is for managing retail stores and chains, users and their store assignments in the REP system.

Store Management

This module allows the maintenance of the regional hierarchy and the retail environment. Each country has a unique structure and all options detailed below may not apply. The initial setup of this data is created from the data contained in the Roll Up file that was submitted.

Regional Hierarchy Chart

Edit Hierarchy

```

```

Hierarchy List

Region Area District Stores Chains Chain Classification

Add

	Name ↑	Active
	Mid West	Yes
	North East	Yes
	Pacific North West	Yes
	South East	Yes
	South West	Yes

Regional Hierarchy Chart

This hierarchy is dependent on the structure of the field labor team and the requirements for reporting. Currently, there must be at least one region and the maximum is three. Each level in the hierarchy represents another filter in reporting. In the example above, there are 3 levels that represent a District that a rep covers. Then there are Areas that include multiple reps, and final multiple areas are grouped into Regions.

To edit the hierarchy, click on the **Edit Hierarchy** button on the top left of the screen.

Edit Hierarchy

Level 3 (Largest)

Regional Hierarchy Level 3 (Largest):

Regional Hierarchy Level 1 (Smallest):

Save **Cancel**

Click **Save** when finished.

Add/Modify/Delete Stores

Hierarchy List					
Region	Area	District	Stores	Chains	Chain Classification
 Add					
		Name ↑	Chain	Classification	Region
		1 Best Buy #902	Best Buy		South West
		2 Best Buy #906	Best Buy		Pacific North
		3 Best Buy #907	Best Buy		Pacific North
		4 Best Buy #912	Best Buy		Pacific North
		5 Best Buy #925	Best Buy		South West
		6 Best Buy #926	Best Buy		North East

Selecting the **Stores** tab displays a list of stores loaded into the system from the Roll Up file.

Add a Store

To add a store to the list, click on the **Add** button.

The 'Add Store' dialog box contains the following fields:

- Name: Text input field
- Chain: Dropdown menu
- Classification: Dropdown menu
- District: Dropdown menu
- Address: Text input field
- City: Text input field
- State/Province: Text input field
- Postal Code: Text input field
- GPS Latitude: Text input field
- GPS Longitude: Text input field
- Active: Checkmark (checked)

Buttons: Save, Cancel

Enter a display name for the store in the **Name** field. This is how the store name will display both online and as a pick list on each mobile device. This name should be unique and descriptive for the rep. STORENAME #1, STORENAME #2, etc. An example would be to use the Chain and Store Number like: Currys #152, or using the chain and store number with a city: Currys #152 London.

Note: The address of the store will also be listed for further identification in the user application.

Select the **Chain** for the store from the drop down list.

Select **Classification** (if used) from the drop down list.

Select **District** (this will be customized to your hierarchy, but will always be the lowest level).

Enter in the address information in the appropriate fields. GPS information is not required.

Click on **Save** when finished.

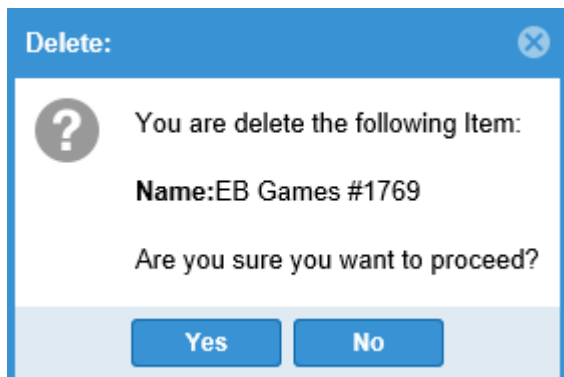

Modify a Store

To change information about a store or make it inactive, click on the edit button to the left of the store name . Edit information as needed and click on the **Save** button when complete.

Delete a Store

WARNING: Currently, deleting a store removes any historic data associated with that store. A solution to allow deleting while preserving the historical data is being investigated.

If a store is no longer needed in the system, click on the delete button .

Click **Yes** to delete the store, or click **No** to keep the store.

If a store is no longer visited, it is advised to mark them Inactive. Click on the check mark next to **Active** to clear the box and make the store inactive. At a future date they can be made active again by clicking the blank box.

A blue dialog box titled "Edit Store" with a close button in the top right. It contains several input fields: "Name:" (CURRYS DONCASTER), "Chain:" (CURRYS), "Classification:" (empty), "Territory:" (Dixons 2), "Address:" (UNIT 1 DANUM RETAIL), "City:" (DONCASTER), "State/Province:" (ENGLAND), "Postal Code:" (DN58AS), "GPS Latitude:" (empty), and "GPS Longitude:" (empty). At the bottom left, the "Active:" checkbox is checked and circled in red. At the bottom right are "Save" and "Cancel" buttons.

User Management

This module allows the maintenance of the management hierarchy and the users of the system. Each country has a unique structure and all options detailed below may not apply. The initial setup of this data is created from the data contained in the Roll Up file that was submitted.

User Types				User List			
Add ☐ Show Inactive				Add ☐ Show Inactive			
	Title ↑	Active	Track Compliance		Name ↑	10-Digit ID	Email
+ Administrator (1 Item)				+ Account Manager (1 User)			
+ Global Read Only (1 Item)				+ Administrator (5 Users)			
+ Manager (1 Item)				+ Master Trainer (2 Users)			
= Representative (4 Items)				= Promoter (3 Users)			
	Master Trainer	Yes	Yes		CMT Demo	4605542744	cmtdemo@wwrcm.com
	Promoter	Yes	Yes		REP Demo	5292865399	repdemo@wwrcm.com
	Representative	Yes	Yes		SME Demo	8599415889	smedemo@outlook.com
	Specialist	Yes	Yes	= Representative (2 Users)			
					Sienna Golden	3495755808	123@west.com

				= Specialist (2 Users)			
					Allison Jones	8995052910	U504@rdmstest.com
					Steve Kerr	5319981109	U508@rdmstest.com

User Types

On the left portion of the screen is the different user types for the country.

- Administrator
 - Full access to all information in the country
- Read Only
 - Guest of the system that can view dashboards only
- Managers
 - Created from the Roll Up file
 - Reps are assigned to managers
 - Managers can view the data submitted by the reps assigned to them
- Representatives
 - Field Reps that visit the stores and conduct training
 - Call reports can be created for different Representative types. Creating multiple rep titles based on their job functions allows call reports to be targeted specifically at the duties of that rep.

Add New User Type

To add a new user type, click on the **Add** button below User Types.

Create New User Type

User Type: Representative

User Title:

Track Compliance: ☒

Active: ☒

Save Cancel

Select the User Type from the drop down list

Enter a name for the User Type.

Track Compliance – if this item is checked then this user type is included compliance tracking. If it is unchecked, they will not see **Store Visit Call Reports** in the application. Admins, managers and Trainers should not have tracking enabled.

Active – A User Type can be made inactive if they are no longer used. This is useful for temporary user groups (promotion staff, holiday temporary workers, etc).

Add a New User

To add a user to the system, click on the **Add** button below User List.

Select the **User Title** from the drop down list.

Enter the user's **First Name**, **Last Name** and **Email** address.

Select the **Time Zone** from the drop down list.

Default log in values are the first initial of their first name, and their full last name. Example: John Doe would be **jdoe** for both the username and password on the first login to the system. The user will be prompted to change their password and set up a security question.

These can be updated by clicking on the check box next to Default Login Values and changing the information.

Click **Save** when complete.

To change their password, click on the check box next to **Update Login Values** and enter in the new username and password values and click **Save**.

Delete a User

WARNING: Currently, deleting a user removes any historic data associated with that user. A solution to allow deleting while preserving the historical data is being investigated.

If a user is no longer needed in the system, click on the delete button 

Confirm Account Deletion:

 **WARNING:**
 You are about to permanently delete
 the following user account:

Steve Kerr

Would you like to proceed?

Yes No Cancel

Click **Yes** to delete the user, or click **No or Cancel** to keep the store.

Make a user inactive

If a user is no longer working, it is advised to mark them Inactive. Click on the modify button 

The screenshot shows the 'Edit User Type' dialog box with the following fields and values:

- User Type:** Promoter
- User Information:**
 - First Name: CMT
 - Last Name: Demo
 - Email: cmtdemo@wwrcm.com
 - Time Zone: (UTC-08:00) Pacific Time (US & Canada)
- Account Info:**
 - Update Login: ☐
 - Values:
 - Username: cmtdemo
 - Password: password
 - Verify: password
 - Active:** ☒ (This checkbox is circled in red in the original image)

At the bottom of the dialog are 'Save' and 'Cancel' buttons.

Click on the check mark next to **Active** to clear the box and make the user inactive. At a future date they can be made active again by clicking the blank box.

Assignments

This module includes the functions to assign stores to reps and use a calendar to graphically assign those store to a monthly calendar.

Store Assignments

Store assignments define the stores that the reps cover. In the Roll Up file, only one user per store was allowed because the file builds the store and user hierarchy. Once a user is added to the system, they can be assigned to a store that already has coverage.

User Store Assignment

Select a user

Available Stores

Store Name	Address	City	State/Province

Calendar

Currently the Calendar function is limited to managing the store list that the rep sees on their device. Additional functionality is being investigated and will be incorporated into future releases.

Admins can schedule all reps, managers can schedule reps assigned to them, and reps can manage their own calendar

If no modifications are using the calendar, then the rep will always see all stores assigned to them in the application.

To have the store list only display the stores to be visited that day, stores can be entered into the monthly calendar.

All stores assigned are listed on the left. If a store is required to be visited more than once in a month, that store will be repeated in the list. For example, if a user is to visit Retail Super Store 4 times in a month, this would list 4 times as:

- Retail Super Store 1 of 4
- Retail Super Store 2 of 4
- Retail Super Store 3 of 4
- Retail Super Store 4 of 4

October 27 - November 30, 2013

This is a drag and drop interface. Drag all stores assigned onto the calendar days in which they are to be visited. As stores are added to the calendar, they will be removed from the required visits column. To remove a store from the calendar, right-click on the store and select delete. The store will move back to the required visits column.

We default the first visit at 7AM and list all others added at a 30 minute increment. This can be edited to more specific times; but the calendar in this implementation is a daily planner with monthly compliance requirements.

Resource File Management

In this module, localized copies of files used by the Reps in the stores can be managed. This can include:

- Plan-o-grams
- Kiosk maintenance and setup instructions
- Demo installation instructions
- Training resources for the Reps

Currently, for the best viewing experience in the REP application it is recommended to utilize PDF, JPG and WMV files. These file types invoke the built-in Windows applications (Reader, Photos and Video respectively) and resize the screen appropriately. This maintains the modern look and feel of the application:

MICROSOFT DEMO INSTALLATION GUIDE

Updated for Holiday, 2013

Before you get started:

- **Uninstall the Windows 8 Demo** if it is already installed on this PC. Learn how to do this on page 9.
- On a **Windows 8 PC that is NOT a Windows RT device**, you may have the option to **upgrade the PC to Windows 8.1** prior to installing the demo. To update a Windows 8 PC to Windows 8.1, please refer to the **Windows 8.1 Update Guide for Demo Devices** document.
- When you are ready to install the Windows Retail Demo, follow the instructions in this document. You can **use the Demo USB to install the Windows Retail Demo** on new **Windows 8.1 PCs**, **new Windows 8 PCs**, RT Devices or on PCs that you **upgraded to Windows 8.1**. This includes Windows RT devices.
- The Windows Demo is installed using a standard USB drive. Some new Small Screen and Tablet devices may have a Micro USB or Mini USB port only. For these devices, you will need a USB to Micro/Mini USB Adapter.

Important Notes

- The term PC is used throughout these instructions. Whenever you see the term PC, it can be applied to any device (laptop, tablet, All-In-One, RT Device, etc...) that is running Windows 8 or Windows 8.1.
- The demo installation process is the same for Windows 8 and Windows 8.1 PCs. When you click on the **LaunchDemoInstall.cmd** (step 4.2), the installer will choose the appropriate demo to install on your device based on the Operating System on the device and Chip architecture (64 bit, 32 bit, or RT).
- If a network is available, please connect the PC to the internet **AFTER** you have setup the local administrator account. Once you have established and logged into the Local Admin Account, the internet connection will not only activate the PC (if not yet activated), but also allow your customers to have an online experience with the demo PC. However if you connect to the internet prior to setting up your Administrator account on a Windows 8.1 device, you may be forced to setup a Microsoft Account as the Administrator account, which would prevent you from being able to install the demo.

The system can support any file type that the PC can load with an associated application, but it will jump to the desktop application and the user will have to swipe back into the REP application after viewing.

When entering the Resource Manager, a list of files that are locally available to use will be visible. To add a new file, click on the upload button.

Active	Title	File Name	Description	Category	Upload Date	Size

Save Cancel

Chose a File Category. These map to the Windows App home screen sections under Resources.

When selecting My Training an additional option to select a File Sub Category is available.

My Training is divided into those sections, plus it contains links to all of the resources that are available for RSP training. This allows the rep to review the RSP Training material without having to be in a call report.

Click on the Browse button and select your file.

Note: *Files are limited to 50Mb or less, and your total file uploads cannot exceed 300Mb. For comparison: November 2013's Training guidance is a total of 135Mb of files.*

Click Save when done.

To remove a resource when it is no longer needed, click on the  button.

To download a file for viewing, click on the  button.

To Edit a file or upload a new copy, click on the  button.

RSP Training Management

RSP Tasks and Files

This module allows the maintenance of the Monthly Training Guidance and the resources that will be used to train the RSPs in store. Add and remove training tasks and resource based on the availability locally. Localized content can also be uploaded to replace the default English content. All content included in the monthly guidance can be found on www.microsoftrad.com.

Each month, the training guidance is pre-loaded into the REP system.

In the left hand column are the training tasks that the field Reps will convey to the RSPs. On the right hand side are resources that facilitate the training tasks. There may not be a 1 to 1 match of training tasks to resources.

To remove items from the training tasks or the associated files, click on the  graphic to the left of each item.

Note: Currently, the ability to add new tasks is not available. RSP Training tasks are mapped to Global KPI's and we are investigating a method to allow additional local training tasks to be added and mapped properly to those KPIs.

If a task was removed and is needs to be restored, click on the **Add** button on the top left.

When adding tasks, there is list of unused tasks from the monthly training guidance.

Select the tasks needed by clicking on the box to the left of the available task. When finished click on **Add Selected Tasks**.

If there are additional resources to upload, or localized resources, add them by clicking on the **Add** button on the top right.

Previously added files will appear in the Available Files list. To add new files, click on **Upload a New File** button.

Enter a **Title** and **Description** that will appear on the resource tile in the application. Click on the **Browse** button to select your file. Click **Save** when finished.

The screenshot shows the 'Translate Training Content' interface. The 'Language' dropdown menu is open, displaying a list of languages. The 'Content' column lists various training topics, and the 'Target Language' column is empty.

This process is identical to the localizing a call report. Select a language from the drop down list, and double-click on each item and enter the translation. See the [Localization](#) section in this guide for more information.

RSP Database Manager

Coming FY14H2

The RSP Database Manager will allow the maintenance of RSP records including removal of RSP names that are no longer working in the retail stores.

Breaking News

Breaking news is used to inform the reps of new product and other locally relevant information. Each country has the ability to create their own Breaking News. Global Breaking News will be available to accept or reject based on product availability or relevance to your region. If needed, the information can be localized before activating it to be displayed on the reps device.

Breaking News displays on the REP application home screen. It is a scrolling list of items sorted by newest first. Items will expire after 90 days, and be removed from the list.

The Breaking News module will list all breaking news created locally and any news items that have been created by the corporate team. Items create by the corporate team will be marked as inactive to allow verification of relevance by each country. This also allows the country administrator to have the item localized and even replace the picture associated with the news item.

Change Log

Coming FY12H2

Track changes to the information in the REP system. Basic tracking of items include additions and deletions of users, call reports, stores, etc. Login data will be tracked as well.

Appendix

Appendix A – Administrator Setup Checklist

- ☐ Website Login & Password
 - Initial login and password change
 - Changing your account information
- ☐ Welcome Page Review
 - Modify the Welcome Page for your region
- ☐ User Management
 - Add additional administrator accounts (if necessary) Note: Admin accounts are the same charge as reps (\$40 US/month). Later in November, we will be able to create read-only accounts (\$10 US/month). The Viewer accounts can view only (no editing).
 - Limit admin accounts to 5 or less.
 - Review Field Reps and Managers
- ☐ Store Management
 - Review Stores and Chain hierarchy
 - Modify Chain classifications if you need to assign different types of Reps to a store
 - Review Store Assignments and Visit frequency
 - Add/Remove/Reassign stores as needed
 - ☐ Initial Roll Up file prepopulated the store assignments for the primary rep
 - ☐ For dual coverage of a store, you can now assign additional reps to those stores
- ☐ Calendar
 - Schedule store visits for each rep based on the stores assigned and the frequency of visits per month
- ☐ Call Report Management
 - **Tips:**
 - **Create your “largest” call report first (most Sections and questions)**
 - **Add logic**
 - **Localize**
 - **Use this form when creating your subsequent forms, modifying as needed.**
 - **Localization and logic will remain from this report and save you the steps of duplicating that effort in each additional call report.**

All Global templates provide corporate guidance and can be modified to fit your region and retail specific needs. You can:

- Hide sections that do not apply to the retail chain
- Hide questions that do not apply
- Add Questions for locally relevant information
- Using the Global Store Visit Call Report
 - ☐ Global template for field labor store visits
 - ☐ Create call reports based on the needs of the chains in your region
- Adding tasks/questions

- Localization of call reports
 - ☐ Multiple languages per call report
 - ☐ Defaults to English if no translation entered
- ☐ File Uploads
 - Upload Resources used by the Reps
 - ☐ My Training = Field Rep training
 - ☐ Kiosk Maintenance = setup/ troubleshooting instructions for kiosks
 - ☐ Plan-o-grams = store display plan-o-grams
 - ☐ Demo Installation = Windows 8/8.1 installation/troubleshooting instructions
 - a.
- ☐ Monthly Training Guidance
 - Modify monthly training guidance topics
 - Assign resources to training categories
 - ☐ RSP Training. Selecting the following categories will allow the resource to automatically appear in the appropriate training section in the RSP Training form on the Windows App
 - a. General
 - b. Hardware
 - c. Office
 - d. Surface
 - e. Windows
 - f. Xbox
- ☐ Call Reports – Escalations
 - Configure email escalations based on call report answers
- ☐ Call Reports – Scheduled
 - Configure automatic Excel reports for each type of call report
 - ☐ Can be scheduled Daily, Weekly or Monthly

Appendix B – REP Windows 8 Beta Installation and Setup Instructions

What do you need to get started:

A developer license is required to install and use this beta version of this program. Installation instructions on how to install that license are included below. You will need to start this installation process from the Windows tablet you are planning on using, and you must have a valid Microsoft Account before getting started. You will also need your 10 digit ID number from the Welcome screen of <http://www.msftreps.com>. If you do not have your ID number, please ask your local administrator for assistance.

If you already have the application installed and are updating to a new version, you must uninstall the existing version first. You can do this by:

1. Locate the Retail Engagement Program tile on your start menu
2. Swiping with your finger in a downward motion on the tile (or right-click with a mouse)
3. Select the Uninstall Icon from the tray

Step 1 — From your Windows browser on your corresponding Windows device, click on the appropriate download button below to retrieve the zip file. *(Note: the zip file name will change based on the revision level. The format is w8test2_x.x.x.xx_AnyCPU_REPS_Test.zip)*

Please review the installation instructions below prior to downloading the application for your device.	
For Windows 8.X	For Windows RT
	

Step 2 — You will be prompted to Open the file on your tablet. Select Open (or the language denoted to open) on your tablet.

Step 3 — Click OK if prompted for Windows Security.

Step 4 — Select the menu item that says extract:

Step 5 — On the Ribbon, click "Extract all".

Step 6 — Keep the default options and select the Extract button.

Step 7 — This will display the zip file in the directory. Please click on the zip file to display enclosed files.

Step 8 — Hold down on the file called: Add-AppDevPackage. This will display the menu shown in the next step.

Step 9 — Hover over the file "Add-AppdevPackage.ps1", use your right mouse and select "Run with PowerShell".

Step 10 — If you are installing for the first time, you will need to register for a developer license. If you have already installed, just press Enter at the first prompt and proceed to "Starting the Program" section below.

Step 11 — Click "Yes" on User Account Control screen.

Step 12 — Click "I Agree" on the Developer License screen.

Step 13 — Sign in with your Microsoft Account (not your domain account).

Step 14 — Click on "Close" after confirming you have a Developer License. Note that the license expires and you will have to repeat this process in 30 days or if you install again.

Step 15 — If prompted like below, type "Y" then press "Enter".

Step 16 — Press "Enter" after verifying the package was installed successfully.

```
Windows PowerShell

Found package: C:\Users\brianpan\Downloads\w8test2_1.0.0.20_AnyCPU_REPS_Test\w8test2_1.0.0.20_AnyCPU_REPS_Test\w8test2_1.0.0.20_AnyCPU_REPS.appx

Before installing this package, you need to do the following:
- Acquire a developer license
Administrator credentials are required to continue. Please accept the UAC prompt and provide your administrator password if asked.
Press Enter to continue...
A developer license was successfully acquired.

Installing package...

Success: Your package was successfully installed.
Press Enter to continue...
```

Step 17 — If after installing the developer license you are not taken back to installing the program, simply start on **Step 7** and continue.

Starting the Program

If you are using Windows 8, the application icon will appear on the far right of your Start screen:

If you are using Windows 8.1, swipe up from the bottom of your Start screen, and you will see the program listed as "Microsoft Retail Engagement Program" with "New" highlighted below it. Right-click on the icon and select "Pin" to start at the bottom. The application will now appear on the far right of your Start screen.

Upon running the application for the first time, you will be asked to enter in a 10-digit ID number. You can find your ID number on the Welcome Page of <http://www.msftreps.com>. If you do not have access to this site, please ask your administrator for assistance.

Appendix C – Global KPIs tracked in REP

Category	Workstream	Measure Type	Measure Name	Measure Definition
Surface	Labor	KPI	# of stores visited per month	# of unique retail outlets visited by MS hired reps per month.
Surface	Labor	KPI	# of store visits per month	# of total actual store visits including multiple visits to the same store
Surface	Education	KPI	# of 1:many training impressions	# of RSP impressions via 1:many training events (# of "impressions" not # of unique RSPs trained) e.g. 1 RSP may attend 3x 1:M training = 3 impressions
Surface	Education	KPI	# of 1:1 training impressions	# of RSP impressions via 1:1 training events (# of "impressions" not # of unique RSPs trained) e.g. 1 RSP may attend 3x 1:1 training = 3 impressions
Windows	Labor	KPI	# of stores visited per month	# of unique retail outlets visited by MS hired reps per month.
Windows	Labor	KPI	# of store visits per month	# of total actual store visits including multiple visits to the same store
Windows	Education	KPI	# of 1:many training impressions	# of RSP impressions via 1:many training events (# of "impressions" not # of unique RSPs trained) e.g. 1 RSP may attend 3x 1:M training = 3 impressions
Windows	Education	KPI	# of 1:1 training impressions	# of RSP impressions via 1:1 training events (# of "impressions" not # of unique RSPs trained) e.g. 1 RSP may attend 3x 1:1 training = 3 impressions
Office	Labor	KPI	# of stores visited per month	# of unique retail outlets visited by MS hired reps per month.
Office	Labor	KPI	# of store visits per month	# of total actual store visits including multiple visits to the same store
Office	Education	KPI	# of 1:many training impressions	# of RSP impressions via 1:many training events (# of "impressions" not # of unique RSPs trained) e.g. 1 RSP may attend 3x 1:M training = 3 impressions
Office	Education	KPI	# of 1:1 training impressions	# of RSP impressions via 1:1 training events (# of "impressions" not # of unique RSPs trained) e.g. 1 RSP may attend 3x 1:1 training = 3 impressions
Xbox	Labor	KPI	# of stores visited per month	# of unique retail outlets visited by MS hired reps per month.
Xbox	Labor	KPI	# of store visits per month	# of total actual store visits including multiple visits to the same store
Xbox	Education	KPI	# of RSPs trained 1:1 MS Led	How many RSP are being trained face-to-face by Microsoft staff or Microsoft-hired field reps.

Appendix D – Field Types

Alphanumeric – this field support letters and numbers. It is used to enter names, license number, locations and other brief text entry items. Advanced options include making this a required field, supporting a default value, and more.

Numeric Only – used largely with mobile phones (Surface offers a full keyboard where this is less needed). This will default a smaller device keyboard in the numeric pad mode. Advanced features similar to Alphanumeric.

Yes or No – Common option when created forms and call reports. Questions that require a yes or no response also support a set of advanced features for formatting and defaults. Yes or No will translate automatically on the device per the language the device is set to (you may notice this missing in the language tools; it is handled automatically)

Date – phone option only. A date field can be created to default to today's date and be changed to show some future date like a follow up for example. Note, all records are date and time stamped on our server when submitted. This option is NOT needed to note when a record has been created or submitted.

Email Address – adding email addresses to this section will email a copy of the current call report to that person. It is an easy way to share a report with a store manager or someone else who might want a copy of the work you just performed.

Pre-defined List of Values – Technically a drop down box. When you create a pre-defined list of values, you are setting the user up to only select 1 item from a pick list. Advanced option include items such as selecting one of the items to be a default value, etc.

Multiple-select List of Values – were pre-defined is a single select, this is check off all that apply. Think check boxes; pick more than one. This section also comes with a variety of advance options to choose from.

Large Text Box – typically used for notes or any place in which you want the user to type longer sentences into the form/call report.

Display Message – This feature allows you to put some basic instructional text within your form or call report. Title it but then enter in your text. This is often instructions or reminders, etc. related to that part of the form.

Phone Number – more of a phone option where we are bringing up the phone key pad to enter in a 10 digit based phone number.

Bar Code – supported on the phone and potentially coming soon for the Surface, using the camera function, bar codes and other scan formats are supported.

Photo – Select the photo icon to take a picture. You may take more than one photo. If you take 3 or more, the photos you take will display left and right in a scroll box.

Signature/Drawing – Used largely for a Signature (sign using your finger on the screen), the solution captures signatures and saves them as an image.

Website/File Link Button – Within your call report/form. You can create buttons with words on them. Buttons can either link the user to a website URL or link the user to any number of supported files on the computer. This piece is highly interactive and works in the background with files you loaded in the File Manager. Files that have been uploaded display themselves in a pick list in this section. Title your button, select your file and the user will be able to click on that button on the device side in their form (PDF, JPG, WMV, DOCX, XLSX, PPTX, etc.) Files are then available in Resources on the mobile device as well accessible within each form that uses a button to link to it.
